**CITY OF LOS ANGELES SIXTH STREET VIADUCT REPLACEMENT
PROJECT**

Project Update

July 29, 2015

Dear Kent --

Thank you for your continued interest in the City of Los Angeles' Sixth Street

Viaduct Replacement Project.

PROJECT BACKGROUND

Although the City has tried over the years to save the Sixth Street Viaduct, the 83-year old structure is deteriorating due to a chemical reaction known as Alkali Silica Reaction, and needs to be replaced.

To demolish the existing viaduct and build a new one, the City secured more than \$400 million in federal and state highway funds, making it the largest bridge project in the history of the city.

DEMOLITION OF BUILDINGS NEAR THE VIADUCT

As part of the project, the City's contractor, Skanska Stacy Witbeck (SSW) will begin to remove eight (8) buildings near the existing viaduct that are located directly under where the new viaduct will be built.

The City of Los Angeles is following the highest environmental and occupational safety standards to remove the debris and protect the welfare of residents and businesses in the area. Abatement of all materials will be performed in accordance with federal, state and local regulations. During this phase of the project, please watch for traffic and safety signage as heavy equipment, excavators, and dump trucks move through the area.

The demolition work is scheduled to take place Monday through Friday, from 7 a.m. - 3:30 p.m., beginning August 17, 2015 through December 4, 2015, at the following sites:

- 567 S. Mission Road
- 631 S. Anderson Street
- 589 S. Santa Fe Avenue
- 1435 E. 6th Street
- 1425 E. 6th Street
- 1415 E. 6th Street
- 637 S. Clarence Street
- 653 S. Clarence Street
